

# LICHEN PLANUS

- Inflammatory disorder
- Skin, Mucus memb, Hair & Nails

*Lichen* – symbiotic plants

Surface pattern of papules

# PATHOGENESIS

- Immunologically mediated  
Antigen - Cell Surface - Alteration  
(Virus/Drug) of HLA  
(foreign)
- Lymphocytotoxic
- Epidermotropism
- Epithelial anchoring disturbed

Genetic susceptibility – HLA-DR I

# HISTOPATHOLOGY

- Hyperkeratosis
- Irregular acanthosis
- ↑ granular layer – Wickham's striae

- Rete ridges – Saw-tooth appearance
- Basal cell degeneration –Colloid bodies
- Melanin incontinence
- Band like inflammatory infiltrate

# CLINICAL FEATURES

World wide distribution

Equal sex incidence

# COURSE

Onset – insidious

Subside in 9-18 mths

Chronic – Hypertrophic

Mucus membrane

# COMPLICATIONS

- Permanent hair loss
- Carcinomatous change in ulcerative (uncommon)

# TREATMENT

## Symptomatic

- Antihistaminics
- Steroids
  - Topical
  - Occlusive dressings
  - Intralesional

## Mouth lesions

- Triamcinolone acetonide 10mg (ml)

## Resistant / Extensive Lesions

Systemic

- Prednisolone 15-20mg

- **Others**
  - Griseofulvin
  - Dapsone
  - Cyclophosphamide
  - PUVA

# PITYRIASIS ROSEA

- Acute
- Self-limiting 3-6 wks
- Probably infective
- Children & young adults
- Distinctive skin lesions
- Minimal constitutional disturbance

# AETIOLOGY

Infective

Epidemiological

- Household clustering
- Seasonal fluctuation
- Preceding respiratory inf.

# Clinical

- Primary lesion
- Disseminated 2<sup>o</sup> eruption
- Self limiting course

# VIRAL CAUSE

Picorna virus

## DRUGS

- Metronidazole
- Barbiturates
- Captropril
- Ketotifen

# HISTOLOGY

Not diagnostic

- Patch parakeratosis
- Spongiosis
- Dermal Oedema

# CLINICAL FEATURES

10 - 35 years

## HERALD PATCH

- 1 lesion
- Larger
- Thigh, upper arm, trunk, neck

- Sharply defined
- Bright red
- Round to oval plaque 2-5cm
- Peripheral scaling

(c) University Erlangen  
Department of Dermatology  
Phone: (+49) 9131-85-2727

# After 5 - 15 days

- Crops of lesions
  - 2-3days interval
- Trunk,, proximal limbs
- Discrete, dull pink, oval lesions
- Fine, dry, silvery  
grey scales at periphery

(c) University Erlangen,  
Department of Dermatology  
Phone: (+49) 9131- 85 - 2727

- Centre wrinkled atrophic appearance

‘*Cigarette paper scarring*’

“*Christmas tree pattern*”

- Asymptomatic/slight pruritus

Resolves in 3 – 6 weeks

# DIFFERENTIAL DIAGNOSES

- Drug Rash
- Seborrheic Dermatitis
- Secondary Syphilis
- Guttate Psoriasis

The background features a dark blue gradient with a subtle radial texture. Overlaid on this are several sets of concentric circles in a lighter blue shade. Small, faint grey dots are positioned at the intersections of these circles, creating a sense of depth and geometric precision.

# TREATMENT

None Required
