Pelvis

- Bones
- Ligaments
- Muscles

Bony Pelvis

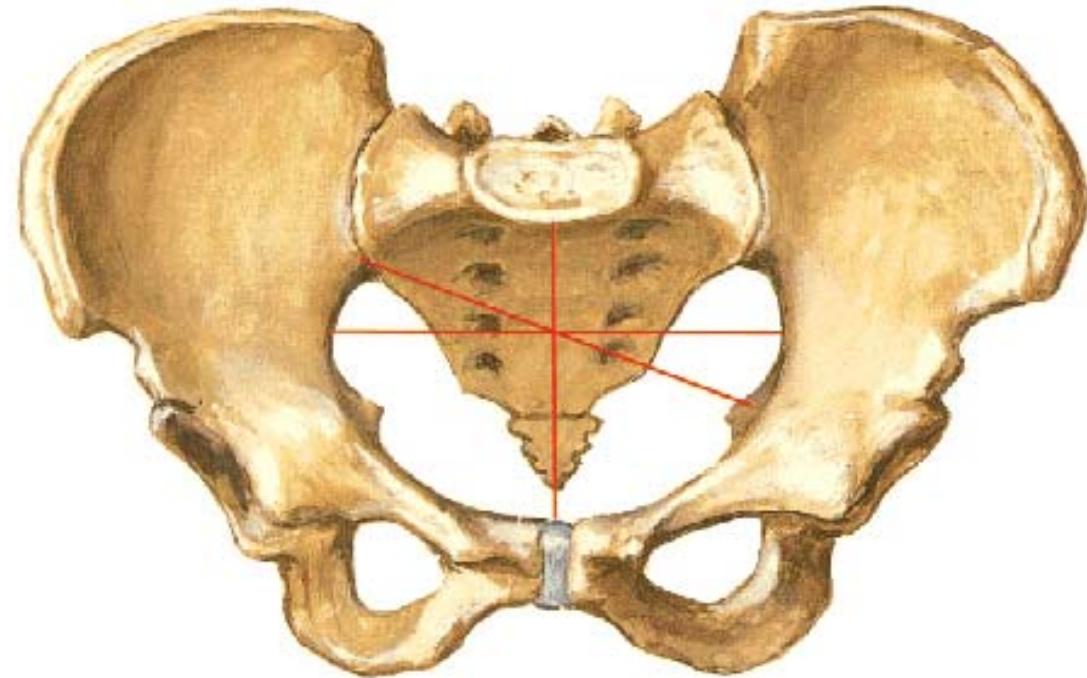

Components

4 bones

- 2 hip bone
- 1 sacrum
- 1 coccyx

4 joints

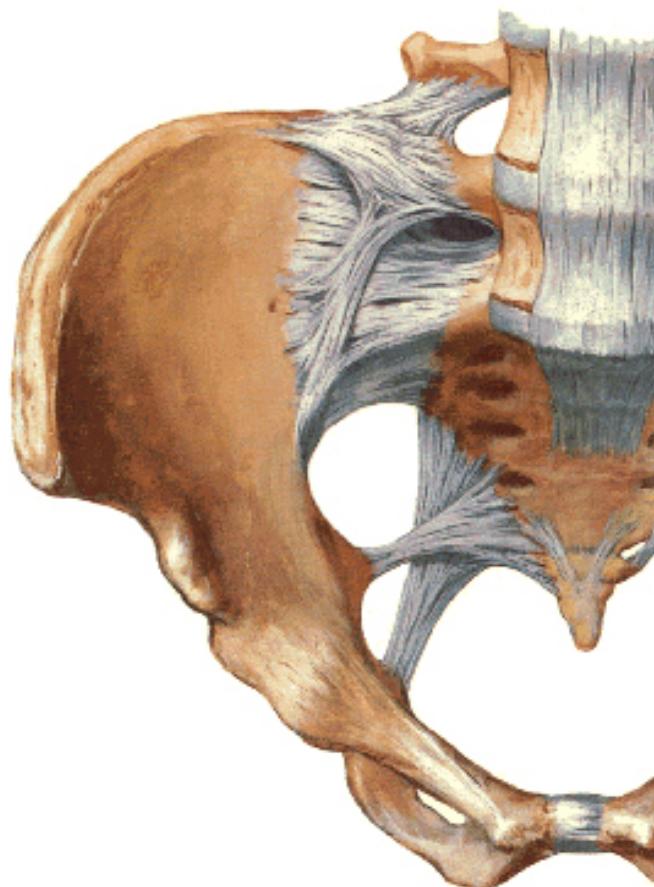

- 2 sacro-iliac (Plane Synovial)
- Symphysis pubis (Sec. Cart.)
- Sacro-coccygeal (Sec. Cart.)

Gateway of Pelvis

- 4 gateways – besides pelvic outlet
1. Below Inguinal Ligament
 2. Obturator foramen
 3. Greater sciatic Foramen
 4. Lesser sciatic foramen

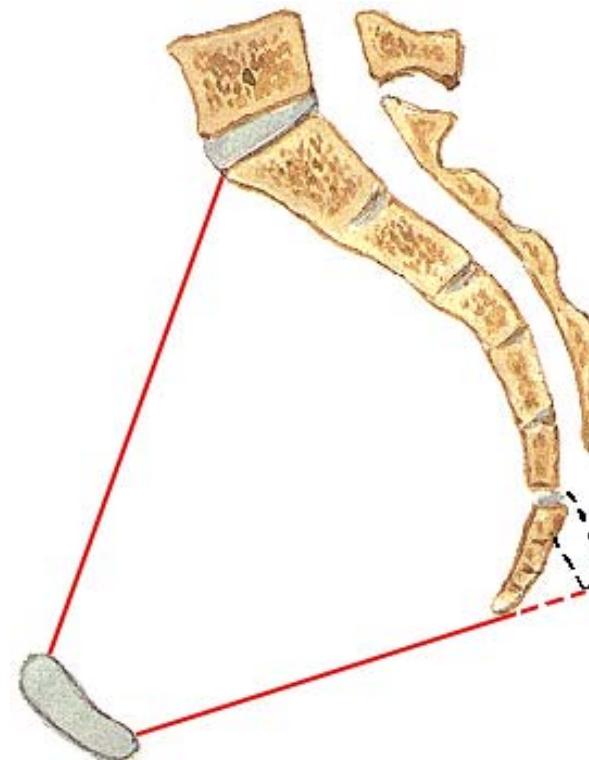

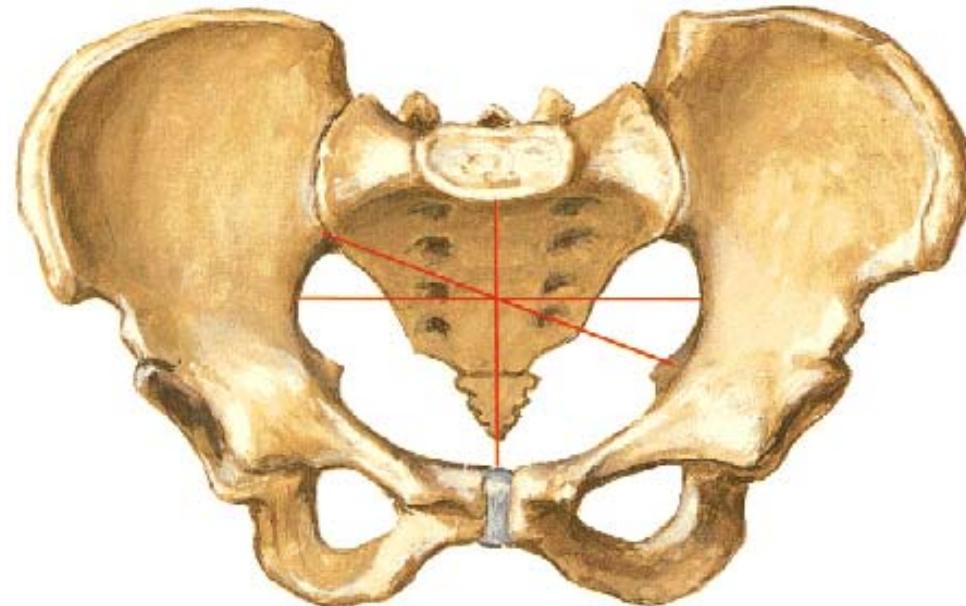

Anatomical Position

- Both **ASIS** & upper end of **symphysis pubis** should lie in same coronal plane
- Pelvic surface of **body of pubis** directed more upward than backward
- Sacral canal facing upward

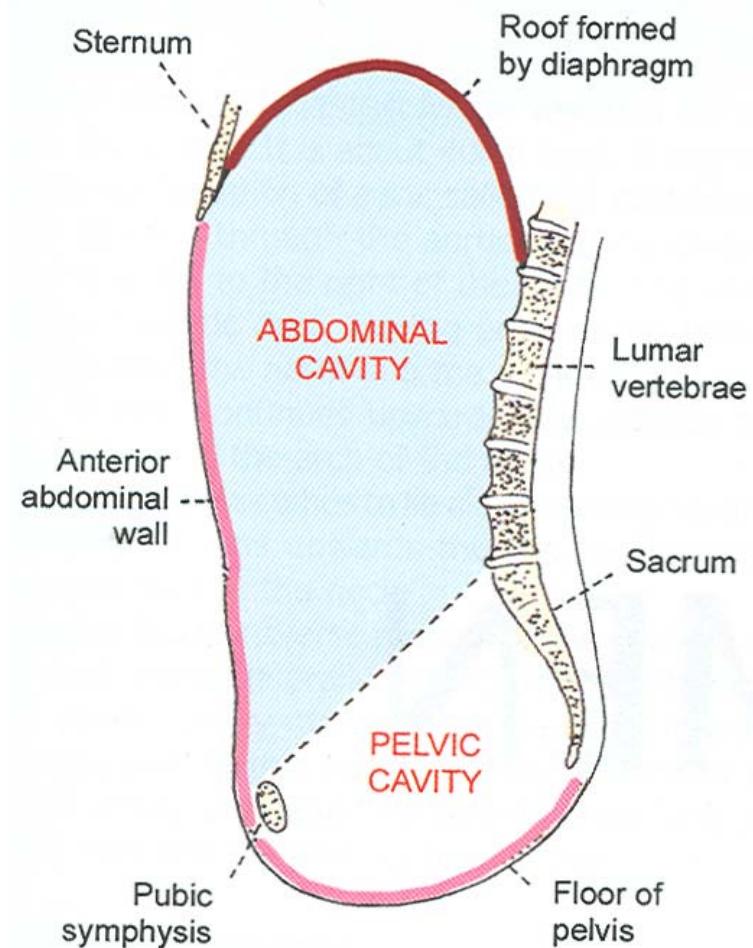

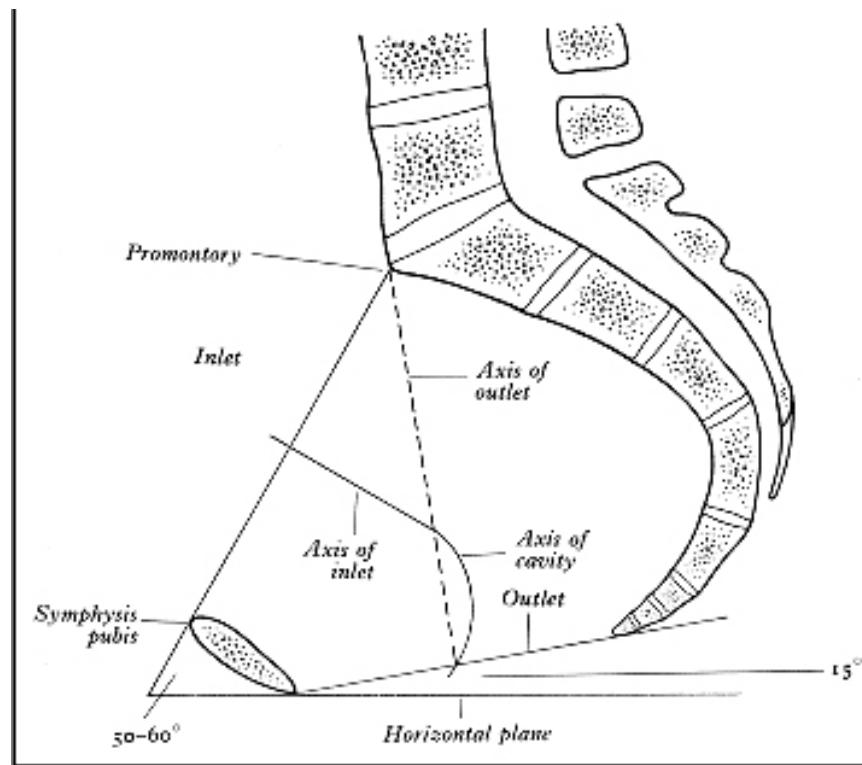

Anatomical Position

- Tip of coccyx should correspond with upper margin of symphysis pubis
- Pelvic surface of sacro-coccygeal curve faces more downward than backward

Anatomical Position

- Angle of pelvic inlet – 50° – 60° with horizontal
- Angle of pelvic outlet – 15° with horizontal

Pelvic inlet

Plane of pelvic inlet

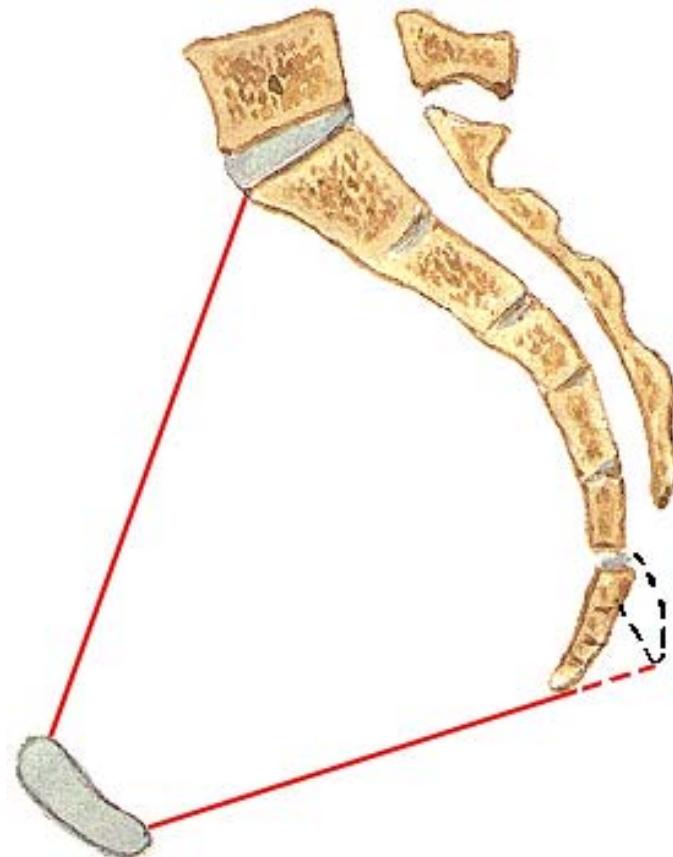

Pelvic Brim

Superior pelvic Aperture

Slopes obliquely

downward & forward

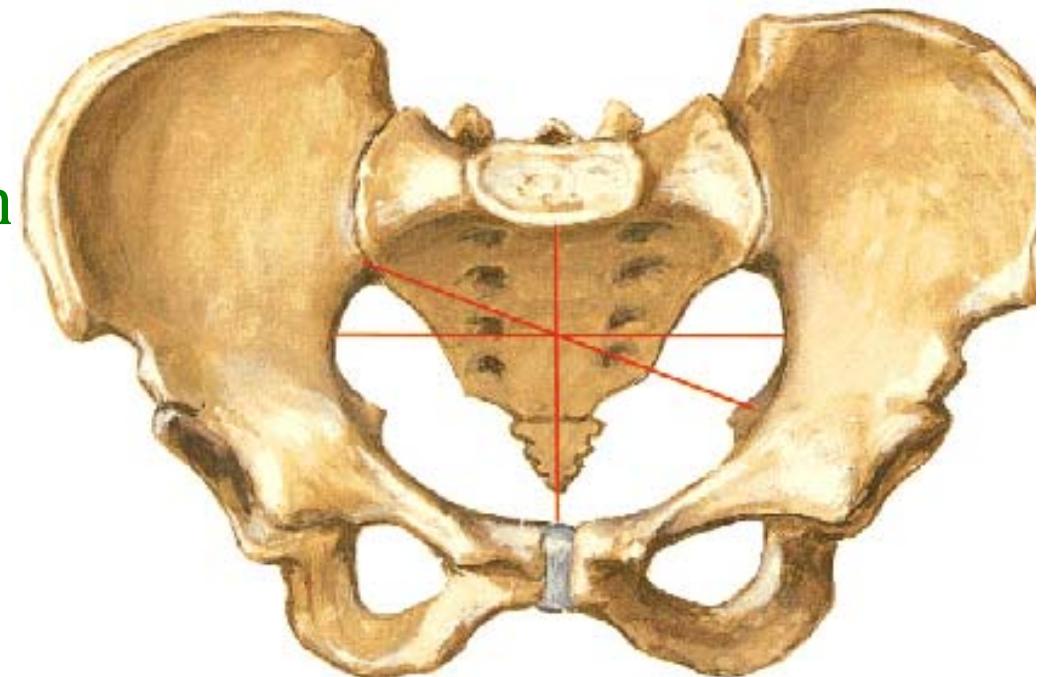

- Sacral promontary
- upper margin of symphysis pubis

Pelvic Brim

Components

- Sacral Promontory
- Ala of Sacrum(ant. Margin)
- Lineae terminalis
 - Arcuate line(ilium)
 - Iliopubic eminence
 - Pecten pubis
 - Pubic crest

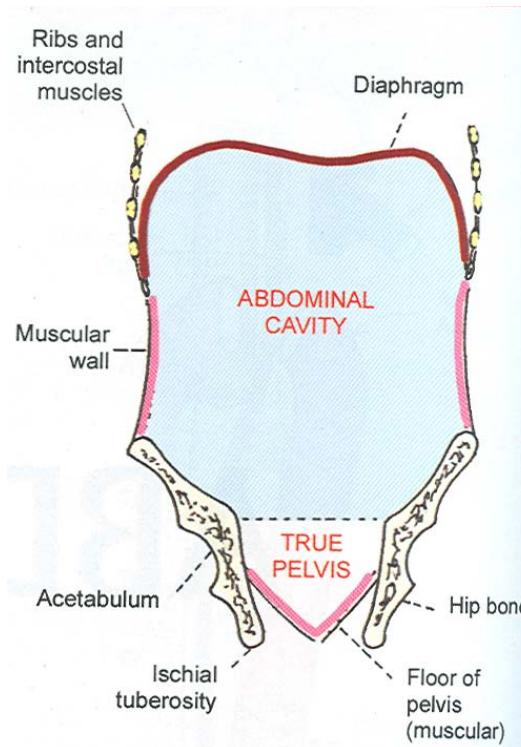

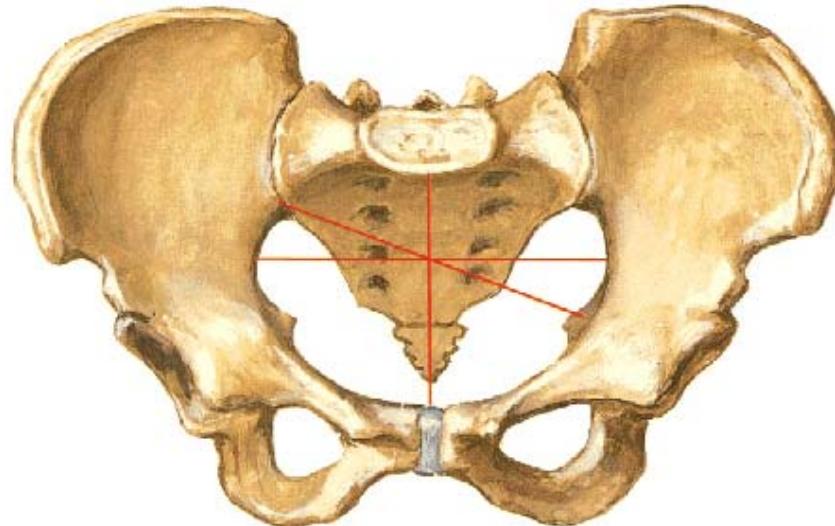

Bony Pelvis

Superior pelvic aperture

Divides into

- Upper wider greater part (**false pelvis**)
- Lower narrower part
(**Lesser or true pelvis**)

Greater Pelvis

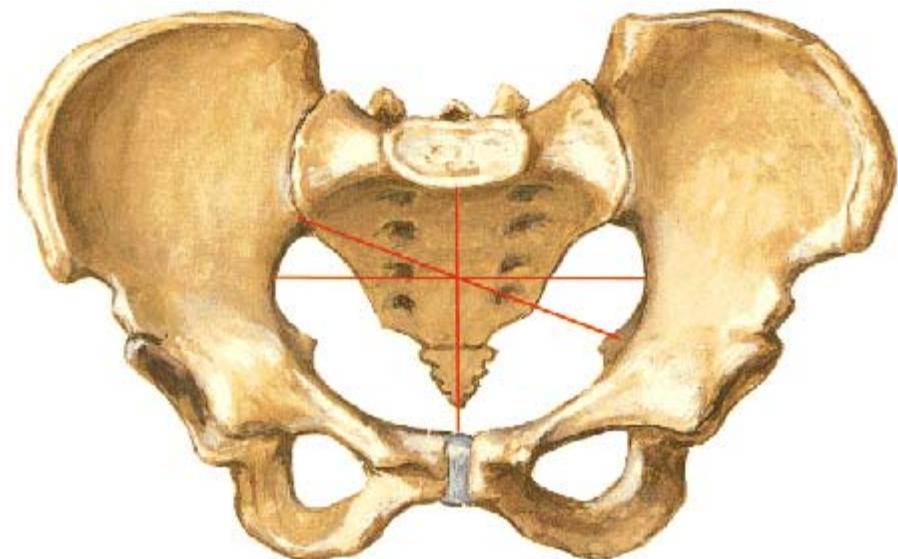

- Upper wider part (false pelvis)
- Lie above & in front of pelvic inlet
- No bony walls anteriorly
- (belong to abdomen proper)

Contribution

- ❖ Iliac fossa of hip bone
- ❖ Ala of sacrum

In females

- Iliac blades are more vertical
- Ant. Sup iliac spine are projected outward

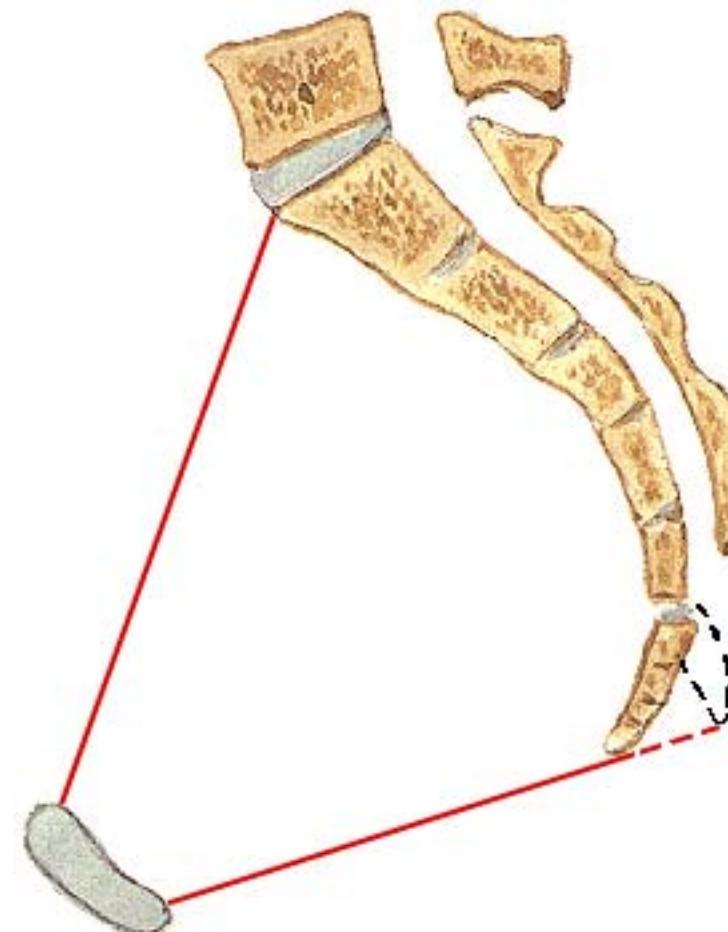

Lesser or true Pelvis

Features

- Pelvic Inlet
- Pelvic Cavity
- Pelvic Outlet

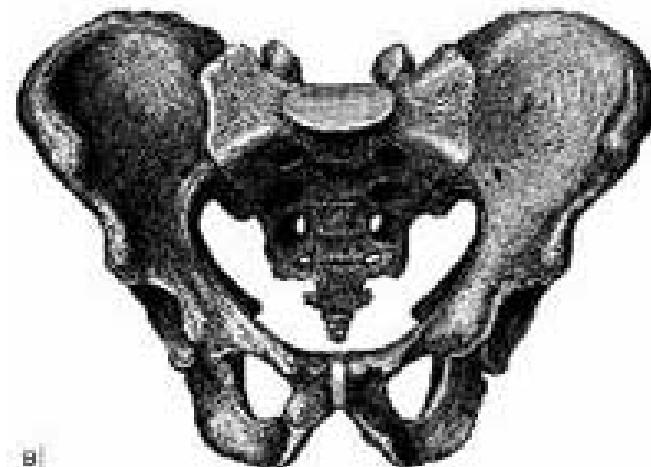

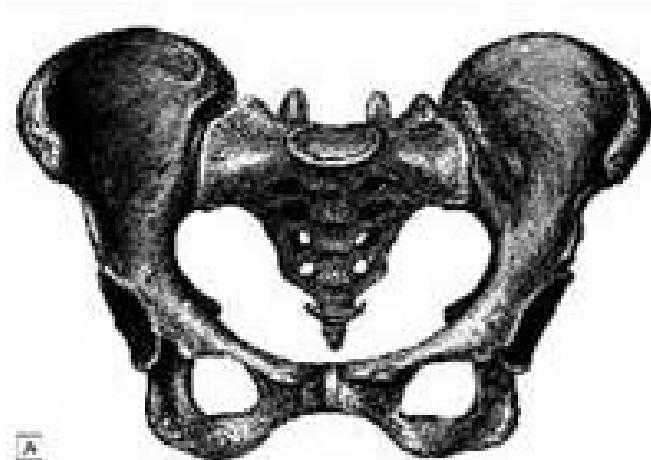

Each can be measured by
three dimensions

- Antero - posterior
- Transverse diameter
- Oblique diameter

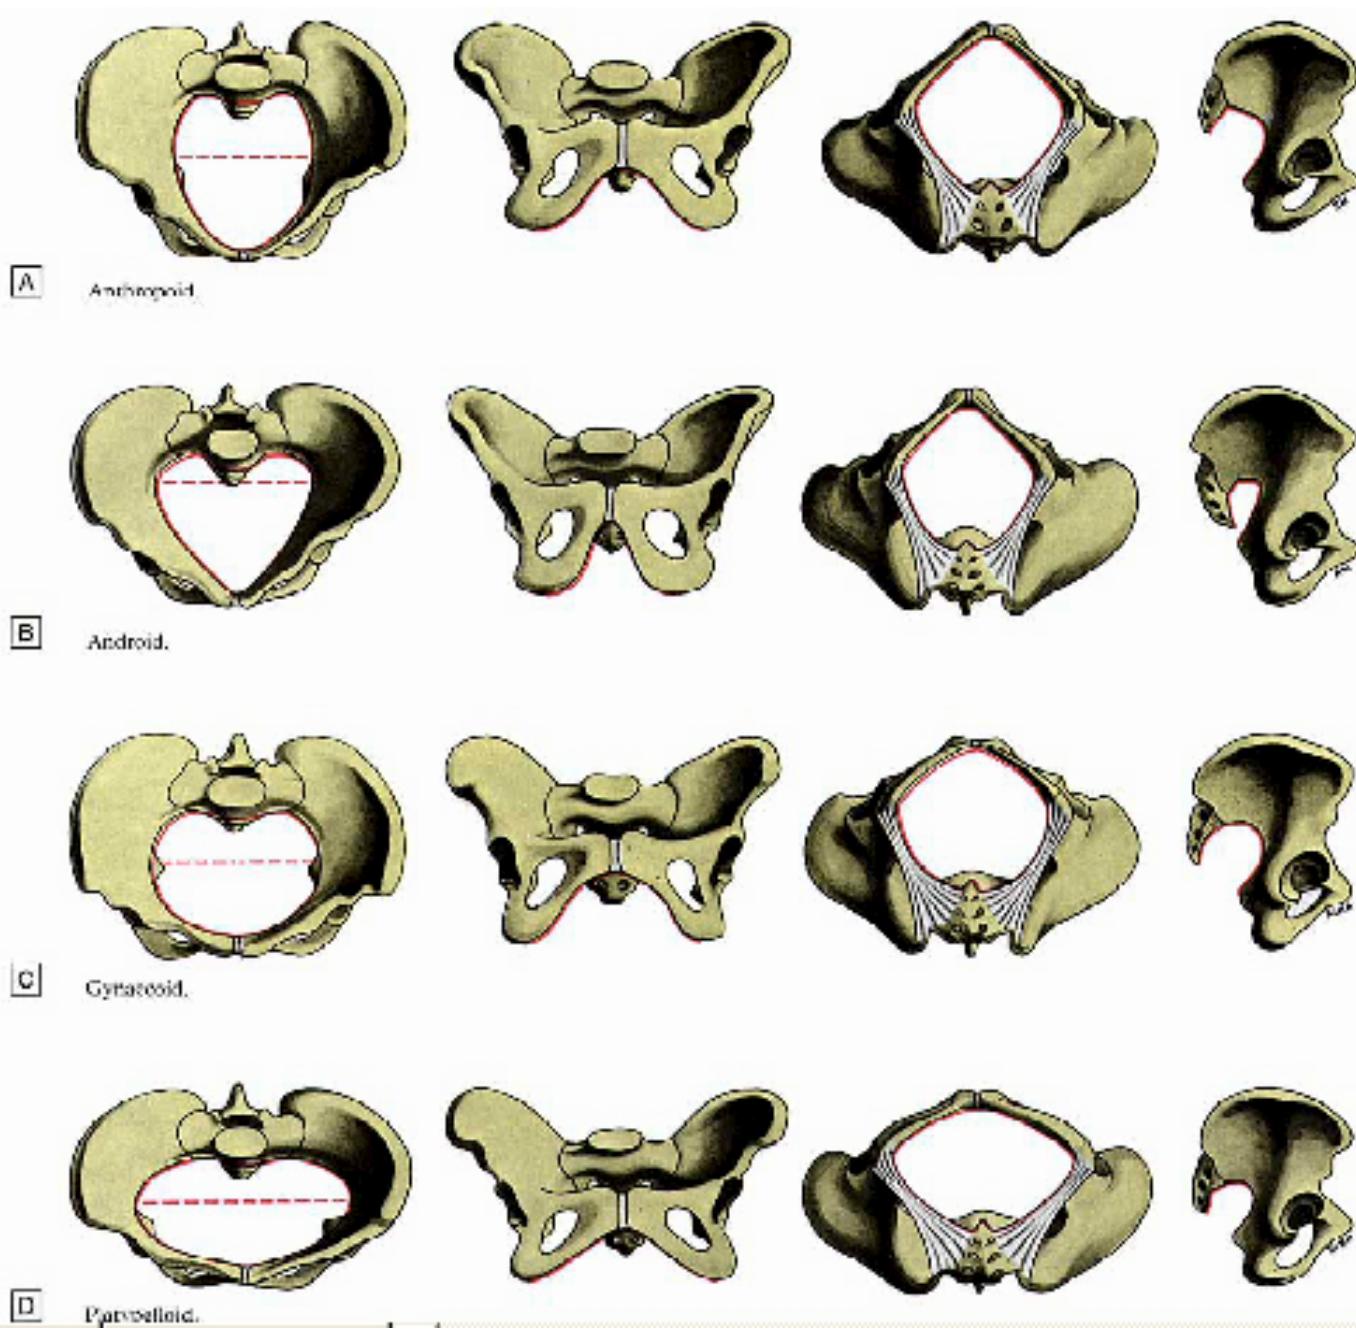

Shape - Inlet

- Heart shaped in males
(widest towards back)
- Transversely oval in females
- At birth pelvis of both sexes
is ovoid

Classification of Pelvis

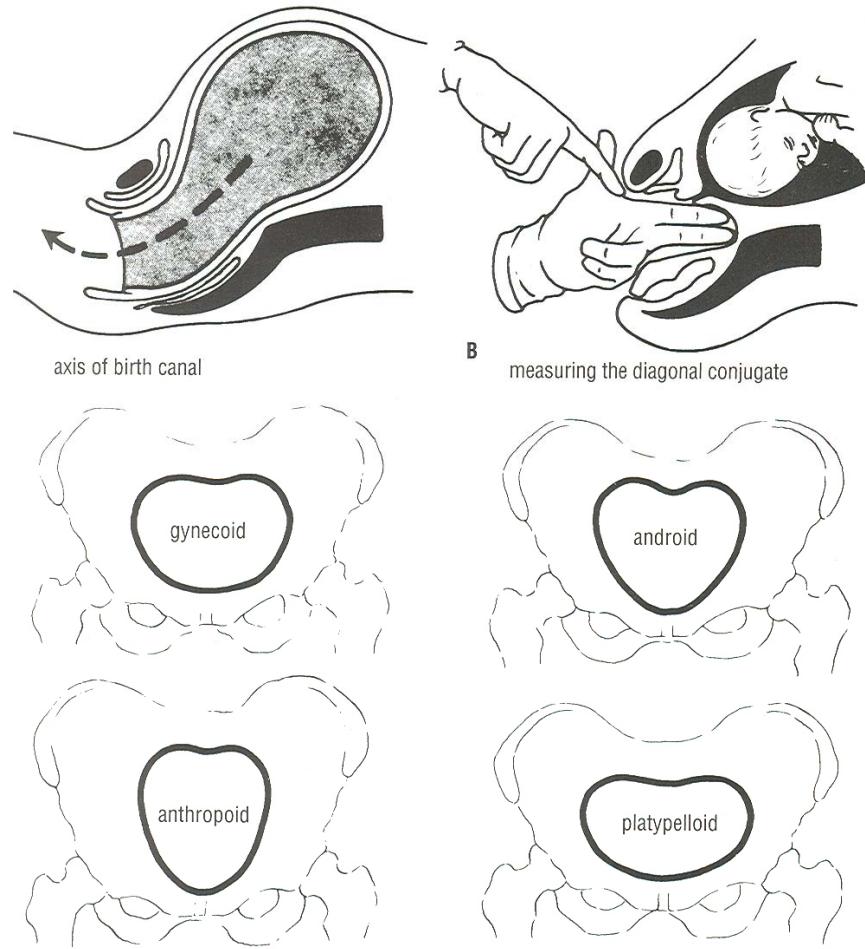

- Acc. to shape of inlet –conventional method used by **Obstetrician**
- Acc. To measurements of inlet – method used by **Anthropologists**

Classification of Pelvis

Acc. to shape

- **Gynaecoid** -Rounded shape, Tr dia widest
- **Android** – heart shaped , inlet more wide in Post. segment
- **Anthropoid** – Oval ,AP dia. More than Tr. Dia
- **Platypaloid** – Flat pelvis , Tr. Dia disproportionately wider than AP dia.

- Anthropoid & Android common in **males**
- Android & Gynaecoid common in **females**
- Platypeloid - rare

Classification of Pelvis

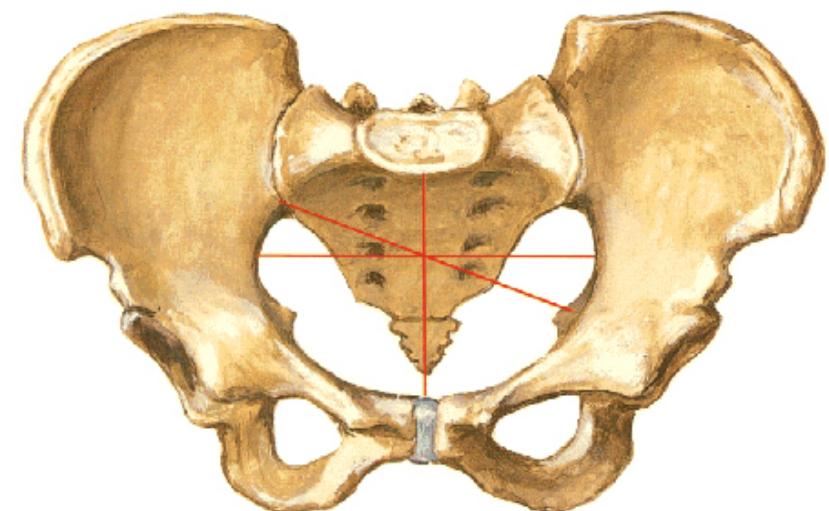

Anteropost. Dia / Tr. Dia. X 100

- **Pletypellic** (transversely flat) - pletypelloid
- **Mesatipellic** (intermediate) -Gynaecoid
- **Dolichopellic** (antero-posteriorly long) –Anthropoid
- **Brachypellic** –Android

Pelvic inlet

- Antero-post. Diameter
(Anatomical conjugate)
- Middle of sacral
promontory – upper
margin of symphysis pubis
- Males- 10 cm
- Females – 10.5 – 11 cms

Female Pelvis
Measurements - Anterior View

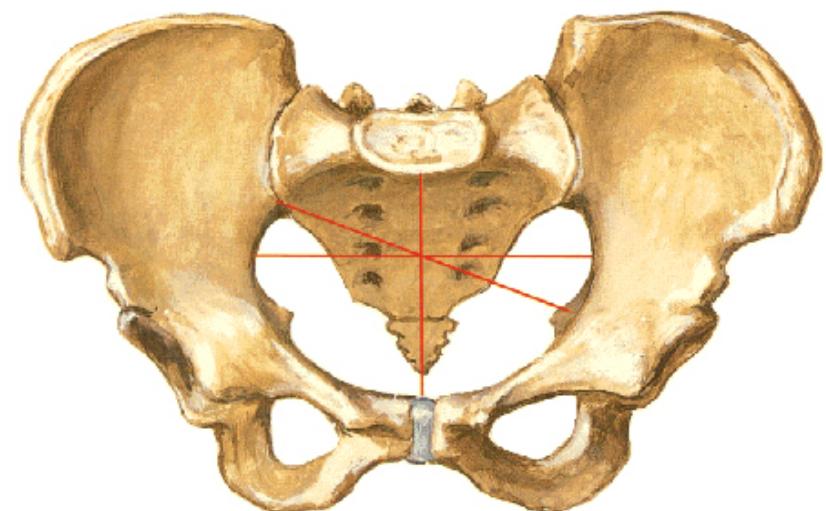

Pelvic inlet

Transverse diameter

- Widest measurement across inlet
- Males – 12.5 cms
- Females – 13 cms

Female Pelvis
Measurements - Anterior View

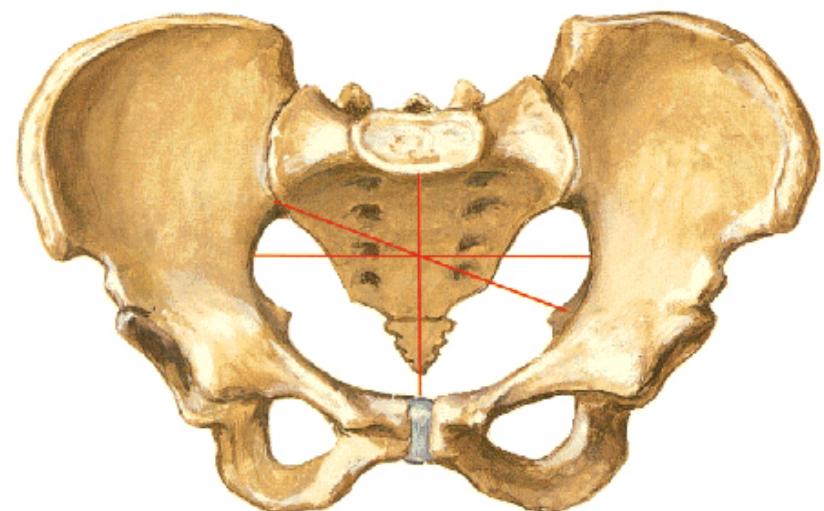

Pelvic inlet

Oblique diameter

- Sacro-iliac joint of one side to ilio-pubic eminence of other
- Males – 11 cms
- Females – 12.5 cms

Female Pelvis
Measurements - Anterior View

- True Conjugate
- Obstetrical conjugate
- Diagonal conjugate
- External conjugate

Pelvic cavity Dimensions

- **Antero-post.**- middle of back of symphysis pubis – centre of pelvic surface of S3
- Female – 13 cms
- **Oblique diameter**- lower end of sacro-iliac joint to centre of obturator membrane – 13.1 cms
- **Transverse diameter** – widest transverse distance – 12.5 cms

Pelvic outlet

- Inferior pelvic aperture
- Diamond shaped

Boundaries

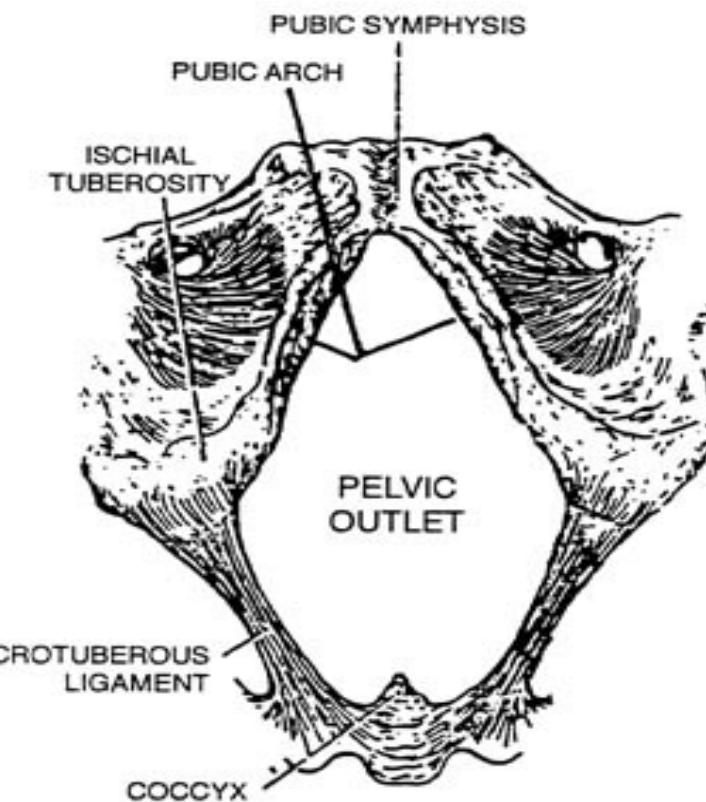

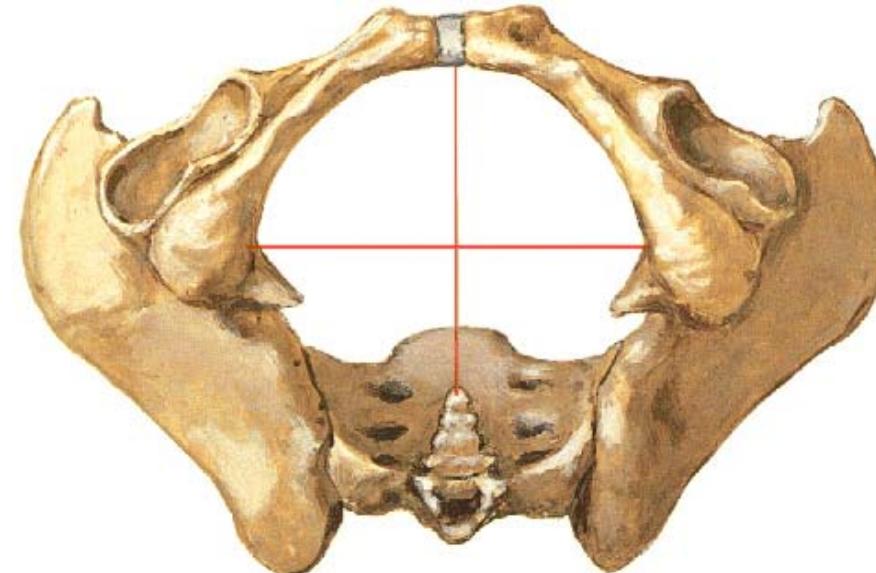

Front- lower margin of symphysis pubis

Behind – tip of coccyx

Antero-laterally- conjoint ischio-pubic rami

Laterally – ischial tuberosities

Postero- laterally – sacro-tuberous ligament

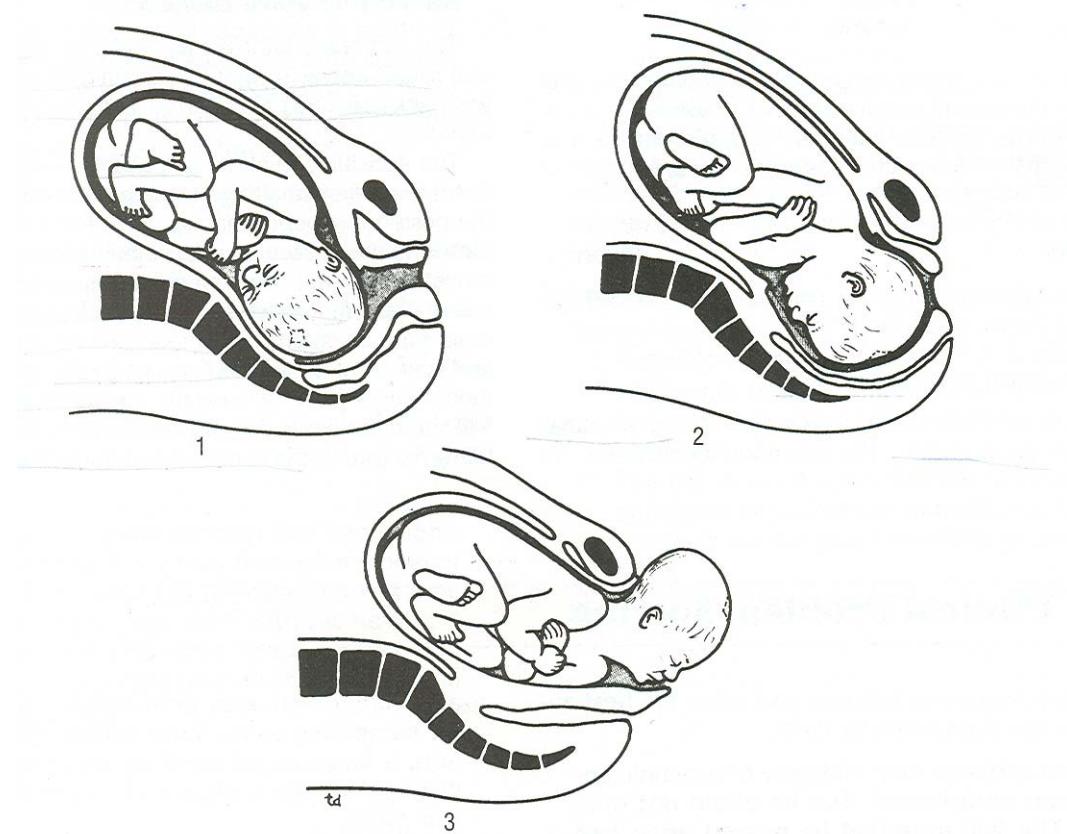

Pelvic outlet dimensions

- AP – lower border of symphysis pubis – tip of coccyx
- Male- 8 cms
- Females – 12.5 cms
- Oblique dia.- junction of ischio-public ramus of one side to middle of sacro-tuberous ligament
- Males – 10 cms
- Females – 11.8 cms
- Transverse Dia. – distance b/w medial surface of two ends of ischial tuberosities
- Males – 8.5 cms
- Female – 11.8 cms

Female Pelvis

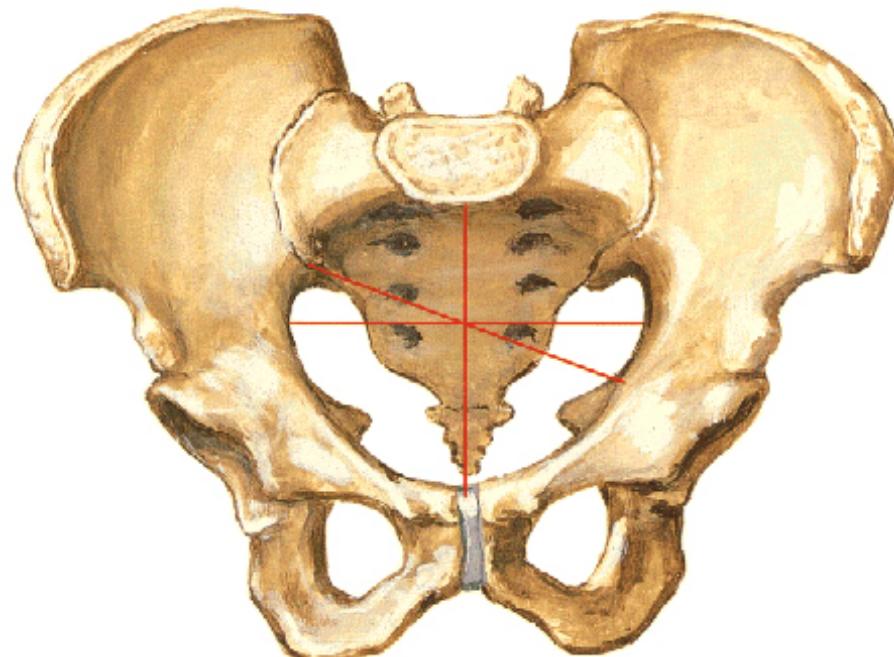

- Wider , Shorter , Shallower
- For accommodation of foetal head & parturition
- Tr. Dia of inlet , Oblique dia of cavity & Ap dia of outlet are maximum
